Mechanobiology in Epithelial 3D Tissue Constructs

ME3T. LECTURES

GRK 2415

Abstract: The recent dramatic progress in artificial intelligence has mainly been driven by machine learning techniques. In this presentation, we will answer the questions: What is machine learning? How does it work? What do we have to consider when using machine learning? How can we apply it in practice, for instance in the context of medical research? We will look at the current state of the art in the field and try to predict potential future developments.
